DECEMBER 2022

1. INTRODUCTION

1.1 OVERVIEW OF THE PROJECT:

The overview of the project is to provide the information of the plants, animals and flowers. A naturalist is someone who studies the patterns of nature, identifies a different kind of flora and fauna in nature. Being able to identify the TOPIC OIDR SEEING THE BIG PICTURE OF EYE HEALTH FACULTY TEAM MEMBERS SUBALAKSHMI.T KEERTHANA.V KALAIYARASI.G MENTOR KOKILA.M flora and fauna around us often leads to an interest in protecting wild spaces, and collecting and sharing information about the species that see on our travels is very useful for conservation groups like NCC. When venturing into the woods, field naturalists usually rely on common approaches like always carrying a guidebook around everywhere or seeking help from experienced ornithologists. There should be a handy tool for them to capture, identify and share the beauty to the outside world.

1.2 PROJECT PURPOSE:

The main purpose of the project is to guide the person who want to know the complete information about the plants, animals, flowers and birds. Digital natural system is an AI enabled tool which is help to the person who don't know about the flora and fauna.

2. LITERATURE SURVEY

2.1 EXISTING PROBLEM:

In the previous model the accuracy of the images are confused and it may show the wrong output and it provide the incorrect information to the client or person and it has an limited amount of the data. The increasing availability of digital images, coupled with sophisticated artificial intelligence (AI) techniques for image classification, presents an exciting opportunity for biodiversity researchers to create new datasets of species observations. To investigated whether an AI plant species classifier could extract previously unexploited biodiversity data from social media photos (Flickr). To found over 60,000 geolocated images tagged with the keyword "flower" across an urban and rural location in the UK and classified these using AI, reviewing these identifications and assessing the representativeness of images. Images were predominantly biodiversity focused, showing single species. Non-native garden plants dominated, particularly in the urban settings. The AI classifier performed best when photos was focused on single native species in wild situations but also performed well at higher taxonomic levels (genus and family), even when images substantially deviated from this Present checklist of questions that should be considered as a similar analysis.

2.2 REFERENCE:

1. AI Naturalists Might Hold the Key to Unlocking Biodiversity Data in Social Media Imagery.

2. Enabling Biodiversity Research with Automated Species Identification.

3. Plant Identification Using Artificial Intelligence Innovative Strategies for Teaching Food Biodiversity.

4. Naturalist opens up a wealth of nature data and computer vision challenges.

5. Researchers get AI help to map ecosystem, wildlife conservation.

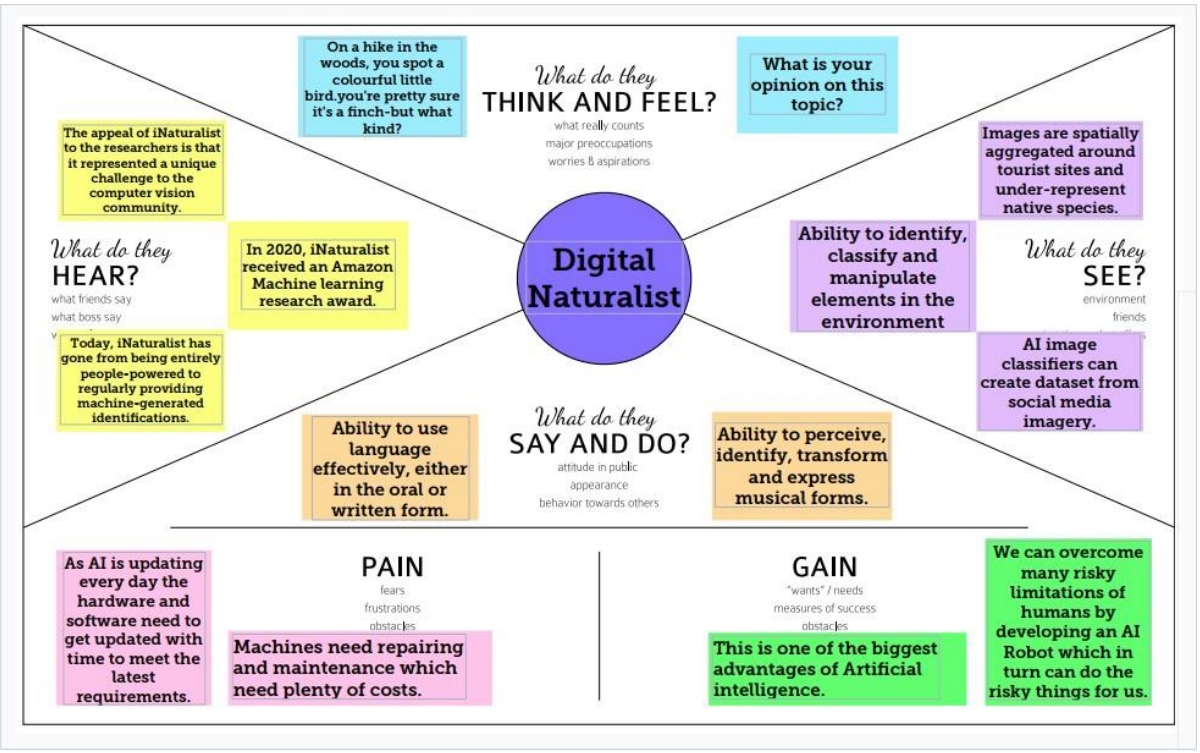
2.3 PROBLEM STATEMENT DEFINITION:

To provide the information about of plants, animals, flowers and birds the previous system provides the limited amount of the data in current project we are going to rectify it.

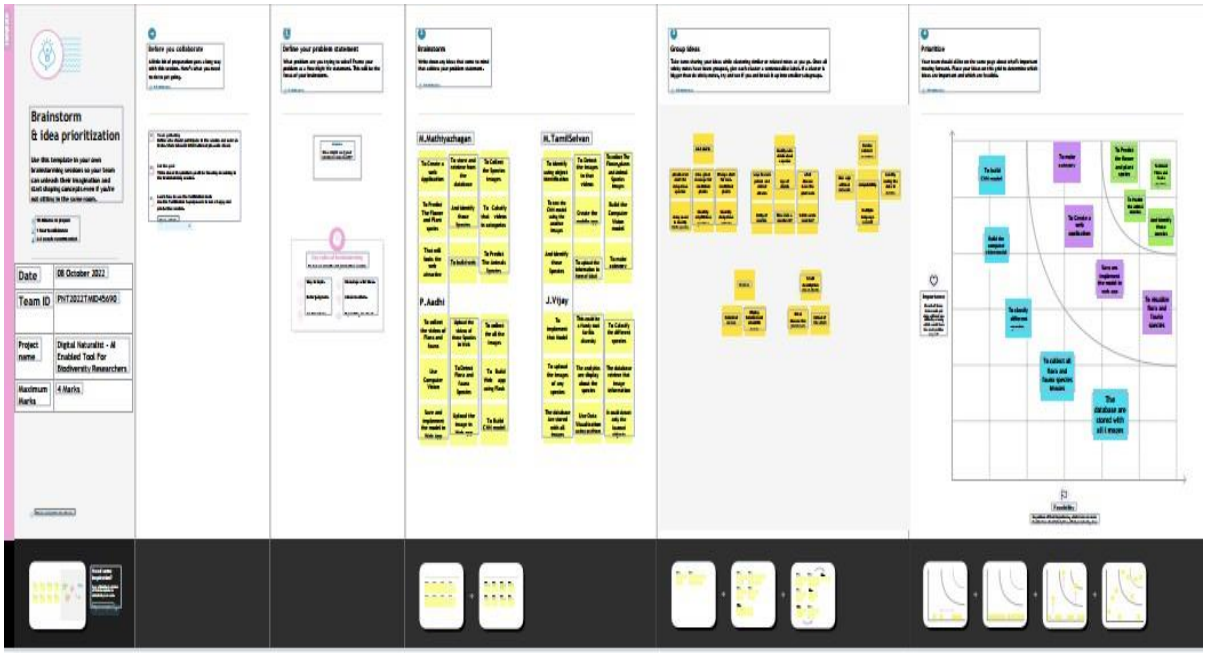
To provide the complete information about animals ,flowers and birds because the previous system provide very limited information.

3. IDEATION AND PROPOSED SOLUTION

3.1 Empathy Map Canvas:



3.2 Ideation & Brainstorming:



3.3 Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	To build an efficient AI based image Recognition tool which effectively to curb out the following constraints: – Helps Naturalists and NonNaturalists users or the common people who go for hikes , canoe trips , excursions to explore the different species of flora and fauna found in that terrain – To capture the flora and fauna using the AI tool – • To provide the information about the flora and fauna species

2.	Idea / Solution description	This system is built by using the Image/object recognition and classification using (CNN) convolutional neural network. By using this system, we can capture the image of any animals and plants and can obtain the information about the flora and fauna at any time • Show alert messages for plants/ animals using different colours and in which way they are highlighted • Display rarities of the species • Description about the species
3.	Novelty / Uniqueness	This AI powered chatbot gives a 24*7 efficient automated so that the service can be used anywhere and anytime . This system carries out the visualisation of the interpreted results. It also provides various information regarding the respective flora and fauna. • Complete description about the characteristics of the species and Alert the users if the species is dangerous or not • Giving the medicinal values of plants and its description • Displaying the names in 7 taxonomical levels of each flora and fauna • Alerting the user based on rarity of the species found
4.	Social Impact / Customer Satisfaction	The feasibility of implementing this idea is moderate neither easy nor tough because the system needs to satisfy the basic requirements of the customer as well as it should act as a bridge towards achieving high accuracy on predicting and analysing the image taken as input and to deliver the output with respective to the input image. • Identifying the flora and fauna in our locality / environment helps in improving and understanding biodiversity and the importance of conserving and preserving them for our future generations • Establishment of more national parks and wildlife sanctuaries.

5.	Business Model (Revenue Model)	By using this system, the users can predict and analyse the picture of the animals or plants. In which it results to the visualizing the description of the flora or fauna which taken as input. • Partnership with many naturalists, universities and scientists around the world
6.	Scalability of the Solution	By implementing this system, the people can efficiently and effectively to gain knowledge about the nature they want and they wish to use at anytime. This system can also be integrated with the future • Technologies As the application grows more popular, new and innovative features can be added now and then • Subscriptions can be classified according to the type of users including the Normal plan,Educational plan, and Business plan

3.4 Problem Solution Fit:

4. REQUIREMENT ANALYSIS

4.1 Functional Requirements:

Anaconda Navigator

Keras

Tensorflow

Sklearn

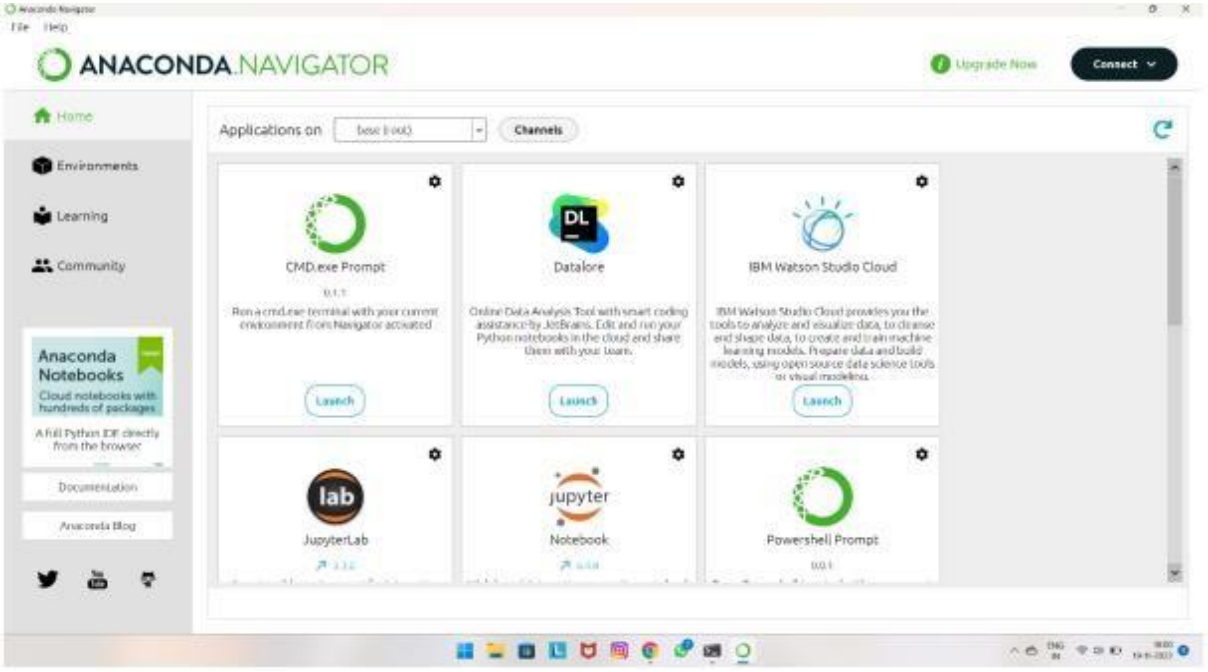
Pandas

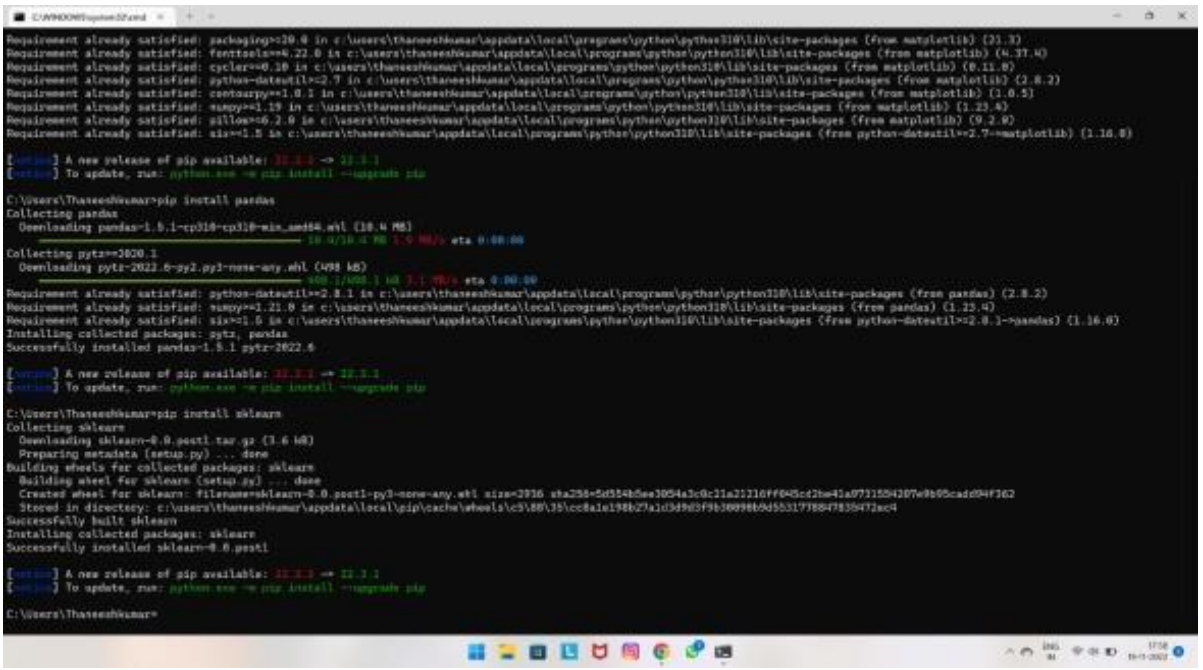
Numpy

Flask

Matplotlib

Opencv-python.





Requirement already satisfied: packaging>=20.0 in c:\users\thaneeshkumar\appdata\local\programs\python\python310\lib\site-packages (from matplotlib) (21.3)

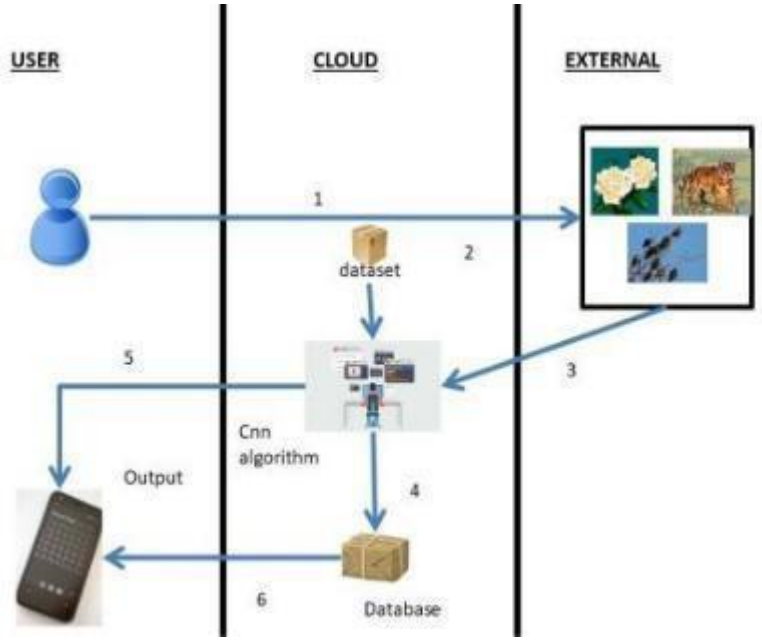
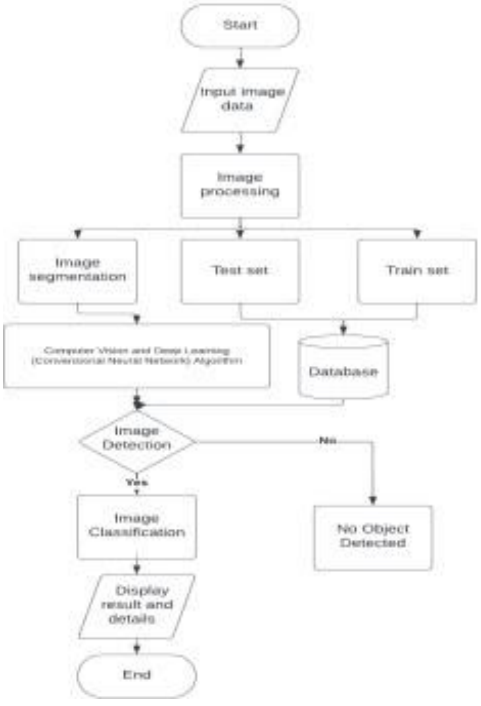
5. PROJECT DESIGN

5.1 DATAFLOW DIAGRAM:



5.2 Solution & Technical Architecture:



5.3 User Stories:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority
Customer (Mobile user)	Image capture	USN-1	As a user, I can take photos of the plant life, animals and birds	I can take photos when required	High
		USN-2	As a user, I will receive processed information about the type of species	I can see the type of plant or animal or plant	High
		USN-3	As a user, I can share it with others	I can share using share option	Low
	Data process	USN-4	Data must be trained and tested and CNN algorithm must work properly.	I must see the correct processed information	High
	Output	USN-5	As a user, I can see the scientific name of the species	I must see the correct data	High
		USN-6	As a user, I can see the characteristics and alert messages	I must see the correct data	High
Administrator	Manage	USN-1	As a admin I must add various data and edit information	I must edit the data present	High

6. PROJECT PLANNING AND SCHEDULING

6.1 Sprint Planning Estimation & Schedule:

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Modelling Phase	USN-1	Data Collecting and digitalizing for analysing	3	Medium	M.MATHIYAZHAGAN
Sprint-1		USN-2	Adding more data to avoid overfitting	2	Medium	M.TAMILSELVAN
Sprint-1		USN-3	Building a CNN model using the collected data	5	High	P.AADHIKESAVAN
Sprint-1		USN-4	Evaluating the model to check the accuracy and precision	3	High	J.VIJAY
Sprint-2	Development Phase	USN-5	Home page Creation – Shows the features of our application	1	Low	P.AADHIKESAVAN
Sprint-2		USN-6	Setting up facilities for user to feed the image	2	Medium	M.MATHIYAZHAGAN
Sprint-2		USN-7	Prediction page creation – shows prediction for the user given image	4	Medium	J.VIJAY
Sprint-2		USN-8	Model loading – API creation using flask	5	High	M.TAMILSELVAN
Sprint-3	Deployment Phase	USN-9	Integrating UI & backend – Connecting the front end and backend using API calls	3	Medium	P.AADHIKESAVAN
Sprint-3		USN-10	Cloud deployment – Deployment of application using IBM Cloud	5	High	J.VIJAY
Sprint-4	Testing Phase	USN-11	Functional testing – Checking the scalability and robustness of the application	5	High	M.MATHIYAZHAGAN J.VIJAY
Sprint-4		USN-12	Non-Functional testing – Checking for user acceptance and integration	5	High	M.TAMILSELVAN P.AADHIKESAVAN

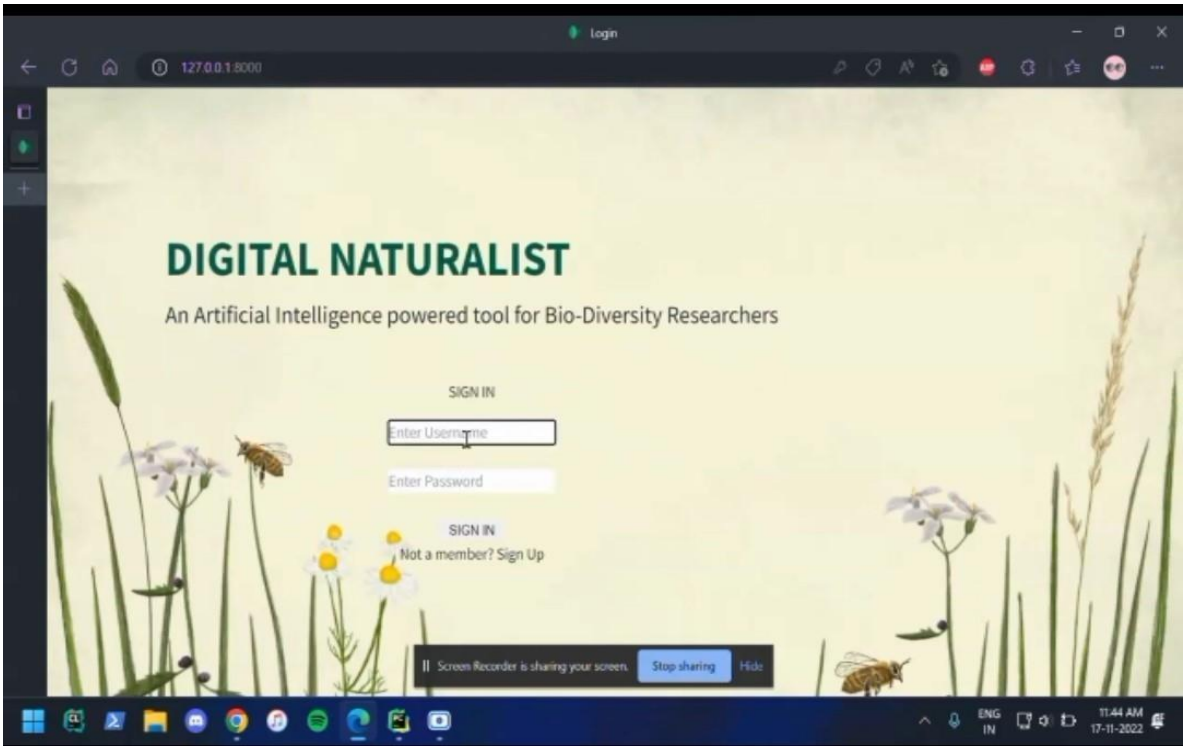
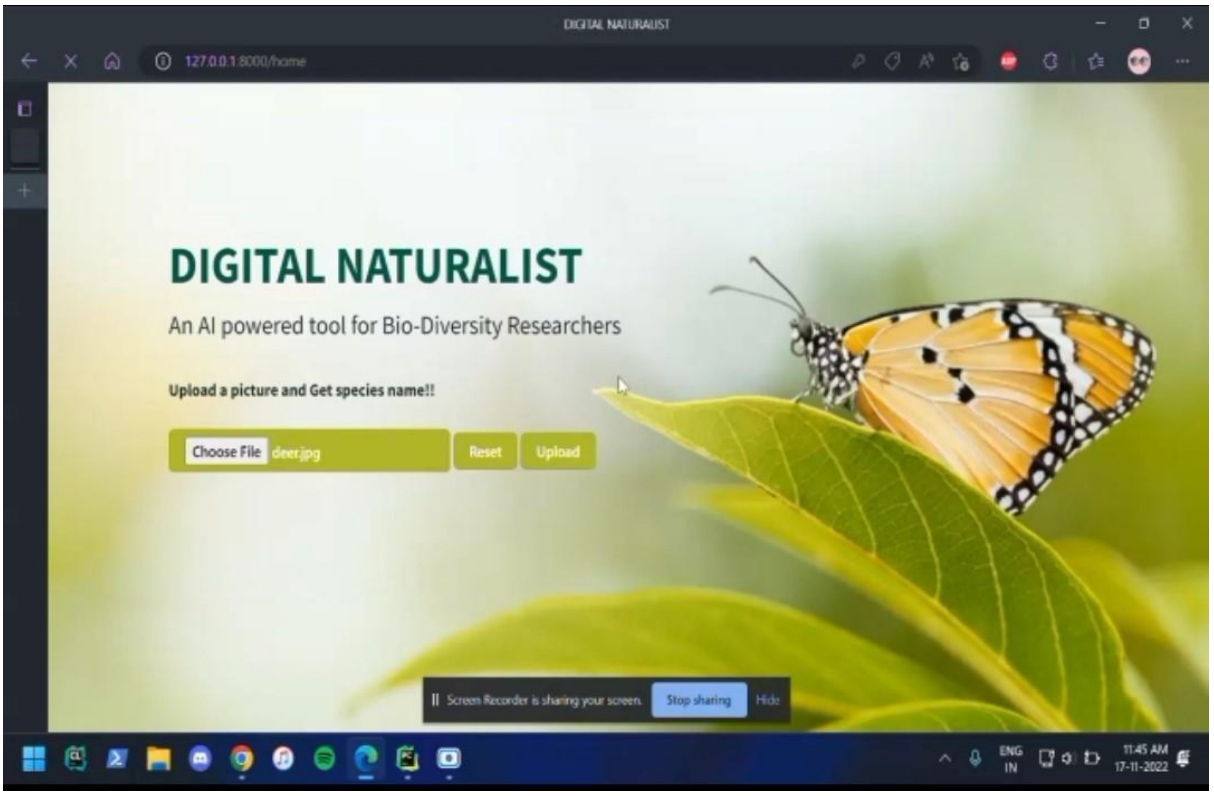
8. TESTING

8.1 Test Cases

9. RESULTS





10. ADVANTAGES & DISADVANTAGES

Advantages:

It is useful to find the new variety of plants, animals and flowers and etc.

It is very useful for client.

Easy to build.

Easy to use.

Disadvantages:

It is little hard to use at the first stage.

It cost is high.

It need more amount of space of memory.

11. CONCLUSION

By combining social media APIs with AI classifiers, Can able to build an AI naturalist capable of creating biodiversity datasets from previously unexploited data sources. However, demonstrate that there are a number of biases in the data produced, some of which may be able to be mitigated against, that must be carefully considered before the data could be used in certain types of analyses.

12. FUTURESCOPE

The future scope of the project is to develop the AI tool into an Most used application for the client and to add the more number of varieties of the plant, animals, plants and sea animals and etc.
